

PARABANK AUTOMATION DEFECT REPORT

Wipro Capstone Project

Project Name	ParaBankAutomationFramework
Application	ParaBank Online Banking
Prepared By	Suraj Shaw
Defect Tracking Tool	JIRA
Total Defects	4
Current Status	Open / To Be Verified

Defects identified during validation of Bill Pay and Transfer Funds modules.

1. Defect Report Overview

This document records the functional defects identified while testing the ParaBank demo banking application. The defects were found during negative and validation testing of the Bill Pay and Transfer Funds modules. Each defect includes reproducible steps, expected and actual behavior, business impact, priority, severity, and evidence requirements so that it can be created and tracked in JIRA.

2. Test Environment

Application Under Test	ParaBank Online Banking
Automation Framework	Java, Selenium WebDriver, TestNG, Maven
Browser	Google Chrome
Operating System	Windows
Build / Execution	Local Maven execution and Jenkins pipeline
Defect Management	JIRA

3. Defect Summary

Defect ID	Module	Summary	Severity	Priority	Status	Reproducibility
DEF-001	Bill Pay	Zero amount payment is accepted	Major	High	Open	Always
DEF-002	Bill Pay	Negative amount payment is accepted	Critical	High	Open	Always
DEF-003	Transfer Funds	Same source and destination account allowed	Major	Medium	Open	Always
DEF-004	Transfer Funds	Zero amount transfer is accepted	Major	Medium	Open	Always

4. Defect Metrics

Total	High Priority	Medium Priority	Open	Closed
4	2	2	4	0

4.1 Severity and Priority Classification

Severity describes the technical and business impact of a defect, while priority indicates how quickly the defect should be fixed.

Classification	Meaning	Applied in This Report
Critical Severity	May cause incorrect financial behavior or serious data inconsistency.	Negative bill-payment amount
Major Severity	Core validation is missing, but the application remains available.	Zero payment, same-account transfer, and zero transfer
High Priority	Fix should be planned immediately because the issue affects financial validation.	DEF-001 and DEF-002
Medium Priority	Fix should be scheduled after high-priority validation issues.	DEF-003 and DEF-004

4.2 Defect Lifecycle

Open -> In Progress -> Fixed -> Retest -> Closed

A defect must be reopened when the original issue is still reproducible during retesting.

5. DEF-001 - Bill Pay allows payment with zero amount

Issue Type	Bug
Module	Bill Pay
Summary	Bill Pay allows payment with zero amount
Description	The application accepts an amount of 0 in the Bill Pay form and completes the transaction without displaying a validation error.
Preconditions	A valid user is registered and logged in. The Bill Pay page is available.
Test Data	Valid payee details; Amount = 0
Steps to Reproduce	1. Log in to ParaBank. 2. Open Bill Pay. 3. Enter valid payee name, address, city, state, ZIP code, phone, and account details. 4. Enter 0 in the Amount field. 5. Select a source account. 6. Click Send Payment.
Expected Result	The application should reject the transaction and display a validation message such as 'Amount must be greater than zero.'
Actual Result	The application accepts the amount and displays a successful bill-payment confirmation.
Business Impact	A zero-value transaction can be recorded, creating invalid transaction data and misleading payment history.
Severity	Major
Priority	High
Reproducibility	Always
Status	Open
Evidence	Attach execution screenshot, console output, or screen recording in JIRA.

[PAP-2] [Bill Pay allows zero amount payment](#) Created: 11/Jun/26 Updated: 11/Jun/26 Due: 30/Jun/26

Status:	To Do

Rank:	0 i0005b:
Start date:	11/Jun/26
Sprint:	PAP Sprint 1

Description

Application allows users to make bill payments with an amount of 0.

Steps to Reproduce:

1. Login to ParaBank.
2. Navigate to Bill Pay.
3. Enter valid payee details.
4. Enter amount as 0.
5. Click Send Payment.

Actual Result:

Bill payment is completed successfully.

Expected Result:

Application should display validation message and prevent bill payment with zero amount.

Environment:

Windows 11

Chrome 149

6. DEF-002 - Bill Pay allows payment with negative amount

Issue Type	Bug
Module	Bill Pay
Summary	Bill Pay allows payment with negative amount
Description	The application accepts a negative value in the Bill Pay Amount field and completes the transaction.
Preconditions	A valid user is registered and logged in. The Bill Pay page is available.
Test Data	Valid payee details; Amount = -10
Steps to Reproduce	1. Log in to ParaBank. 2. Open Bill Pay. 3. Enter valid payee and account details. 4. Enter -10 in the Amount field. 5. Select a source account. 6. Click Send Payment.
Expected Result	The application should reject negative values and display a clear validation message.
Actual Result	The negative amount is accepted and the bill-payment confirmation is shown.

Business Impact	Negative payments may incorrectly increase account balances or create inconsistent financial records.
Severity	Critical
Priority	High
Reproducibility	Always
Status	Open
Evidence	Attach execution screenshot, console output, or screen recording in JIRA.

Description

Application allows users to make bill payments using negative amounts.

Steps to Reproduce:

1. Login to ParaBank.
2. Navigate to Bill Pay.
3. Enter valid payee details.
4. Enter amount as -100.
5. Click Send Payment.

Actual Result:

Bill payment is processed successfully.

Expected Result:

Application should reject negative amounts and display an error message.

7. DEF-003 - Transfer Funds allows the same source and destination account

Issue Type	Bug
Module	Transfer Funds
Summary	Transfer Funds allows the same source and destination account
Description	The application allows the user to select the same account in both the From Account and To Account fields and submit the transfer.
Preconditions	The user is logged in and has at least one active account.
Test Data	Amount = 10; From Account = same account; To Account = same account
Steps to Reproduce	1. Log in to ParaBank. 2. Open Transfer Funds. 3. Enter 10 as the transfer amount. 4. Select the same account in both dropdowns. 5. Click Transfer.
Expected Result	The application should prevent submission and require different source and destination accounts.
Actual Result	The transfer is processed or a success confirmation is displayed.

Business Impact	The system records a meaningless self-transfer and may create incorrect or duplicate transaction entries.
Severity	Major
Priority	Medium
Reproducibility	Always
Status	Open
Evidence	Attach execution screenshot, console output, or screen recording in JIRA.

[PAP-1] [Transfer Funds allows transfer to the same account](#) Created: 11/Jun/26 Updated:

12/Jun/26 Due: 30/Jun/26

Status:	To Do
Project:	ParaBank Automation Project
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Suraj Shaw	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Attachments:	☐ sameAccountTransferBugTest.png	☐ Screenshot 2026-06-12 081140.png
Rank:	0 i00053:	
Start date:	11/Jun/26	
Sprint:	PAP Sprint 1	

Description

Description:

Application allows users to transfer funds from the same account to the same account.

Steps to Reproduce:

1. Login to ParaBank.
2. Navigate to Transfer Funds.
3. Select same account in From Account and To Account dropdown.
4. Enter transfer amount.
5. Click Transfer.

Actual Result:

Transfer is completed successfully.

8. DEF-004 - Transfer Funds allows a zero amount transfer

Issue Type	Bug
Module	Transfer Funds
Summary	Transfer Funds allows a zero amount transfer
Description	The application accepts an amount of 0 and processes the fund transfer.
Preconditions	The user is logged in and has at least two active accounts.
Test Data	Amount = 0; valid different source and destination accounts
Steps to Reproduce	1. Log in to ParaBank. 2. Open Transfer Funds. 3. Enter 0 as the amount. 4. Select different From and To accounts. 5. Click Transfer.
Expected Result	The application should reject the transaction and display an amount validation message.
Actual Result	The application accepts the request and displays a successful transfer message.
Business Impact	Zero-value transactions can pollute transaction history and reduce data quality.

Severity	Major
Priority	Medium
Reproducibility	Always
Status	Open
Evidence	Attach execution screenshot, console output, or screen recording in JIRA.

[PAP-4] [Transfer Funds allows zero amount transfer](#) Created: 11/Jun/26 Updated:
11/Jun/26 Due: 30/Jun/26

Status:	To Do
Project:	ParaBank Automation Project
Components:	None
Affects versions:	None
Fix versions:	None

Rank:	0 i0005r:
Start date:	11/Jun/26
Sprint:	

Description

Application allows users to transfer funds with amount equal to 0.

Steps to Reproduce:

1. Login to ParaBank.
2. Navigate to Transfer Funds.
3. Select valid source and destination accounts.
4. Enter amount as 0.
5. Click Transfer.

Actual Result:

Transfer is processed successfully.

Expected Result:

Application should display validation message and prevent zero amount transfer.

Environment:

Windows 11

Chrome 149

9. Recommended JIRA Workflow

- Create each issue with Issue Type = Bug.
- Use the defect summary as the JIRA Summary field.
- Copy the description, preconditions, steps, expected result, and actual result into the issue.
- Set Priority to High or Medium according to this report.
- Attach screenshots and execution evidence.
- Move the issue through Open -> In Progress -> Fixed -> Retest -> Closed.
- If the issue is still reproducible during retest, reopen it with new evidence.

10. Defect Closure Criteria

- The developer provides a fix in the target build.
- The original reproduction steps no longer produce the defect.
- Related positive and negative regression tests pass.
- No new issue is introduced in Bill Pay or Transfer Funds.
- Evidence of successful retest is attached to the JIRA issue.

11. Conclusion

Four functional validation defects were identified in the ParaBank application. Two defects are High priority because they permit zero or negative bill payments, while two are Medium priority in the Transfer Funds module. All defects are reproducible and should be logged in JIRA with the supporting screenshots and execution evidence. After fixes are delivered, the affected scenarios should be retested and included in the regression suite.
